1. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or fairly suggest a tire vulcanizing mold comprising a plurality of circumferentially segmented pieces, wherein at least one of the segmented pieces has generally round-bar-shaped projecting pin protectors on an assembling face between an adjoining segmented piece, and said adjoining segmented piece has first radial depressed grooves of generally arcuate cross section on an assembling face between said segmented pieces to be fitted with the pin protectors, and said at least one segmented piece has second radial depressed grooves of generally arcuate cross section for fixing the pin protectors, the second radial grooves provided plurally and axially spaced, as claimed in claim 9.

The closest prior art of record is considered to be Fisher (U.S. Patent 2,030,861), which discloses a tread mold having a plurality of circumferentially segmented pieces, first and second arcuate depressed grooves (one radial groove and two spaced axial grooves) on the assembling faces of respective adjacent segmented pieces, and pin protectors fixed in the depressed grooves of one of the adjacent segmented pieces such that the pin protectors are fitted in the depressed grooves of the other adjacent segmented piece; however, Fisher does not teach or fairly suggest plural radial grooves which are axially spaced.

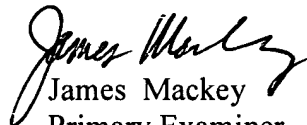

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
